

Xymon

Lárus Árni Hermannsson

Basis ehf.

Sagan

- Tilraunir Henrik Storer (1964) til að hressa uppá Big Brother
- Byrjar 2001 (Data center í DK)
- Hobbit verður “BB Free” 2005
- 2008 Tolkien estate óhressir með nafnið
- Nón 2008 Hobbit verður Xymon
- "The Anything Monitor"

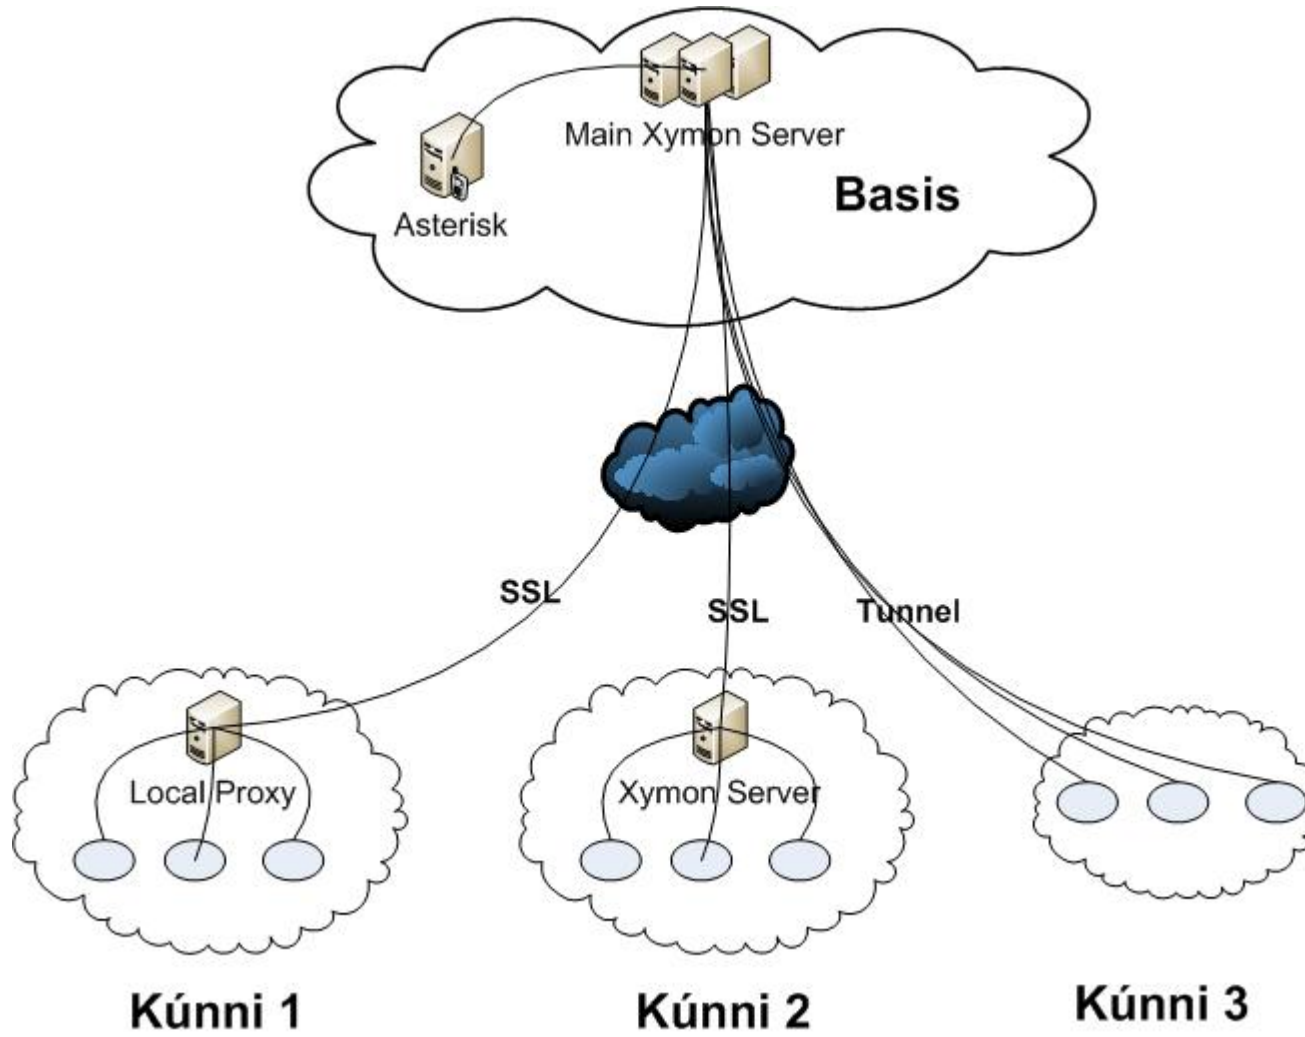

Högun

- Server – Client
- Server tasks eru uppskiptanleg (en oftast á einum server)
 - Main server: All current data
 - 1+ RRD server: Trend og History data
 - 1+ Web display
 - 1+ servers: Misc Network test
- Client: Push en ekki Polling

Hobbit Client

- Clientinn er heimskur (Dumb Client)
- Aðeins gagnasöfnun
 - Keyrir algengar skipanir sem gefa status
 - Safnar tölulegum gögnum
 - Skannar Log-fæla
 - Skoðar möppur og skrár
 - Execute custom test
- Hrágögnin eru send á Server til úrvinnslu

Proxy og Local Forward

Hvað getur Xymon mónítorað?

- Slatti af “pre-built tests”
 - Network (external) monitoring
 - ping ,FTP, SSH, SMTP, POP, IMAP(S), NNTP(S), LDAP(S) query, HTTP(S) w/ content, SSL certificate, etc.
 - Local client monitoring
 - cpu, disk, memory, services, procs, files, etc
- Hafsjór af “community tests” þarna úti
- Build you own!
- Forritunarmál að eigin vali

"The Anything Monitor"

- Xymon serverinn tekur við
 - Status
 - Message
 - Numerical value
- Hvað viljum við skoða?
 - Veður, hita, titring, mailque, peering, etc.
- Algerlega takmarkalaust
 - Getur þar fyrir ekki tpað í samanburði á “testum”

Hrátt og einfalt = Öflugt

- Sveigjanleikinn kemur frá mörgum sjálfstæðum grunneiningum.
- Ekkert Hókus pókus -> Fílírókus
- Inngangsþröskuldur frekar hár
 - Ekkert “Next->Next->Next” og mús.
- Svotil allt control og config er CLI

Custom test

```
#!/bin/bash
```

```
COLUMN=weather; COLOR=green
```

```
DEGREES=`/usr/local/bin/getweather temperature`
```

```
if [ $DEGREES -ge 30 ]; then COLOR=red; fi
```

```
$BB $BBDISP \
```

```
  "status $MACHINE.$COLUMN $COLOR `date`
```

```
  temperature=$DEGREES"
```

```
exit 0
```

Alerting

- Aðeins hugmyndaflugið takmarkar reglur

```
$WEBHOSTS=%(www|intranet|support|mail).foo.com
```

```
HOST=$WEBHOSTS SERVICE=http
```

```
SCRIPT /usr/local/bin/smsalert 4538761925 FORMAT=sms
```

```
HOST=$WEBHOSTS SERVICE=cpu,disk,memory
```

```
MAIL unixsupport@foo.com
```

```
$UNIXSUPPORT=MAIL unixsupport@foo.com TIME=*:0800:1600 SERVICE=cpu,disk,memory
```

```
HOST=%(www|intranet|support|mail).foo.com
```

```
$UNIXSUPPORT
```

```
HOST=dns.bar.com
```

```
$UNIXSUPPORT
```

Pröskuldar

- HOST=%db.*.foo.com TIME=W:0800:1600
- LOAD 8.0 12.0
- DISK /db 80 90
- PROC mysqld 1

- HOST=%.*.foo.com
- LOAD 7.0 12.0 HOST=bax.foo.com
- LOAD 3.0 8.0

- HOST=host.bar.net
- DISK /mnt/disk1 70 85
- DISK /mnt/disk2 95 98
- DISK /mnt/disk3 95 98
- DISK /mnt/disk4 101 101

Gallar

- Feitar configskrár sem hægt að klúðra!
- Frekar ljótt viðmót
- Config non-gui
- Lítið Access Control
- Mis virk framþróun

Aðrir fíðusar

- Miðlægt config
- Þarf kerfið að geta hringt?
 - Nei
- Þurfa prófin að vera til?
 - Nei
- Xymon er Display og datacollector með allerting mechanisma.

FOSS

- Free as in freedom
- Free as in beer
- Framtíðar trygging fyrir tilvist Xymon
- Eyddu peningum í aðhæfinguna
 - Ekki leyfið!
- Gjaldeyrissparandi er bónus núna
- Af nördum fyrir nördum
