Why I still travel

I don't need to be traveling 24/7. I feel like I was being kidnapped by someone unfamiliar and I couldn't do a thing about it. I was in Osaka, Japan.

My cheeks fell off in Reykjavik

On a scale of 1 - 10 with 10 being the most painful, how would you describe your winter weight? If I were to rate myself I'd say I was 7 in the highest room.

The screenshot shows a Vivaldi browser window with a taskbar at the top containing various application icons. The browser's address bar shows the URL `https://en.wikipedia.org/wiki/VCard`. The main content area is split into two columns. The left column displays a Twitter feed with a post from Vivaldi (@vivaldibrowser) about a new snapshot. The right column shows the Wikipedia page for vCard 3.0, which includes a sample vCard and a description of the format.

Twitter Post:

Vivaldi @vivaldibrowser · 3h
Just out. The new snapshot fixes known issues and brings tab opening speed improvements.

Síður hlið við hlið

The image shows two side-by-side screenshots of Wikipedia pages from a browser window. The left page is the article "Web browser engine", which includes a notice about multiple issues, a definition of a web browser engine, and a bar chart titled "Non-mobile web browser statistics on Wikipedia projects". The right page is the article "Comparison of web browser engines", which contains a line graph titled "Usage share by percent of layout engines/web browsers" and a table of contents.

Web browser engine

From Wikipedia, the free encyclopedia

This article has multiple issues. Please help improve it or discuss these issues on the [talk page](#). *(Learn how and when to remove these template messages)*

- This article **needs additional citations for verification**. (September 2014)
- This article **possibly contains original research**. (May 2014)

A web browser engine (sometimes called **web layout engine** or **web rendering engine**) is a computer program that renders marked up content (such as HTML, XML, image files, etc.) and formatting information (such as CSS, XSL, etc.). A layout engine is a typical component of web browsers, email clients, e-book readers, on-line help systems, or other applications that require the displaying (and editing) of web pages.

Engines may wait for all data to be received before rendering a page, or may begin rendering before all data are received. This can result in pages changing as more data is received, such as images being filled in or a flash of unstyled content if rendering begins before formatting information is received.

Comparison of web browser engines

From Wikipedia, the free encyclopedia

The following tables compare general and technical information for a number of layout engines. While these are mainly used in web browsers, they are also used in small clients for rendering HTML, email, and used to render EPUB e-books, for example. The selection of layout engines that remain in development is much smaller than what is available for most other types of desktop software. A 2015 *Popular Mechanics* article, for instance, noted that "every browser has a rendering engine, but some of them share DNA, and virtually all of them date back decades."^[1]

This article is not all-inclusive—please see individual "Comparison of layout engine" articles for detailed comparisons of HTML5 feature support, CSS feature support, and the like. Unless otherwise specified in footnotes, comparisons are based on the stable versions without any add-ons, extensions or external programs.

Skjáskot af síðu

The screenshot shows the Vivaldi browser interface. The main content area features a heading "Powerful, colorful History" and a sub-heading "EXPLORE YOUR HISTORY". Below this is a "Browsing Activity" section with a bar chart showing activity over time. A "Data selection" dialog box is open, showing options for "Site selection" and "View" (with "View with PTO" selected). The background of the page is a light gray with a subtle grid pattern.

You spend a lot of time on the web. You deserve a browser that is personal, has the functionality you need and the flexibility you crave. You deserve Vivaldi so we made it for you. Enjoy!
