

EFMI Special Topic Conference in Reykjavik June 2 – 4 2010

Seamless care - safe care

The challenges of interoperability
and patient safety in health care

www.sky.is/stc2010

The conference will explore the challenges facing electronic exchange of health information, particularly interoperability of systems and its implication for patient safety and continuity of care. It will reflect on the levels laid out by the EU recommendation of 2008 on interoperability of electronic health record systems, namely the political, organisational, technical and semantic levels and of education and awareness raising.

Furthermore the issue of traceability will be highlighted in the conference by a special workshop jointly organised by HL7 and GS1, who are co-sponsoring the event.

This is a unique opportunity to attend an exciting conference and at the same time experience Iceland. A special post conference trip around Iceland with combined sightseeing and visits to health care institutions has been organised. For information see website: www.sky.is/stc2010
